3-bag

4-bag

5 bag

9bag/concentrate dose upon request

Supersack

Shelf Life

1-year in original, unopened package.

Specifications / Compliances

ASTM CXXX

DESCRIPTION

- EQUINOX n-Hance™ Dose pack line of products is a powdered rheology modifying admixture for use with conforming preblended bags, or feedstock. This product may be added to your mix at the jobsite to deliver both nano-graphene & nano fiber reinforcement to increase the performance of the preblended bag.
- Packaging is available in dose sizes that align with your preferred batch size.

PRODUCT CHARACTERISTICS

Features & Benefits

- Non-disruptive delivery system to add nano graphene & fiber reinforcement.
- Improved workability, spread-ability, and adhesion
- Significant loss reduction as the dosed product will stay where you place it. Extends yield and coverage per dosed bag of preblended Stucco compared to standard preblended bags.
- Improves durability and finished appearance
- The dosed product will pump, spray and finish with improved performance.

Primary Applications

- Stucco; scratch, brown, finish preblended bags

PRECAUTIONS/LIMITATIONS

- Care should be taken to maintain EQUINOX n-Hance Stucco Dose packs above freezing.
- Keep dose packs sealed and closed when not in use.
- While mixing, do not starve the mix and follow mix instructions carefully.
- Do not combine or add with other admixtures. sn
- In all cases, consult the Safety Data Sheet before use.

DIRECTIONS FOR USE & MIX INSTRUCTIONS

EQUINOX n-Hance™ Dose Packs are prebatched for ease of use in the field. When placing your order please align batch size that you are accustomed to mixing by way of the number of preblended bags or concentrate mix design volume.

- Step 1:** Empty entire contents of the dose pack into your mixer/tub.
- Step 2:** Add half of the prescribed potable water as stated on the preblended bag packaging to your mixer/tub.
- Step 3:** Mix for 1-2 minutes to create a fully wet-out slurry. Ensure that all products have mixed and that you do not have dry granules stuck to the sides of your mixer/tub.
- Step 4:** Begin to add the preblended feedstock, but do not add it all at once to prevent starving the mix. While adding the feedstock slowly add the remaining water and continue mixing until all ingredients have been added.
- Step 5:** Once everything has been added to the mixer/tub mix thoroughly for at least 3 minutes to ensure proper mix and performance.

Disclaimer: This product is designed to dose a code conforming preblended bag for your application. The admixture was made to deliver nano carbon and nano fibers materials including n-Graphene to enhance the properties of the product.
